

Anonymous (why?...read on!)

Unique Vehicle Type

Anonymous

This company, who wish to remain anonymous, are the manufacturers of a unique type of vehicle.

So, why are they so shy ?

They wish to remain anonymous not because they are unhappy with AutoTrack, quite the reverse in fact. They consider that our program gives them a significant edge in their particular market. So significant an edge, in fact, that they do not want us to market our product directly to their competitors. And that's about the best recommendation we could get!

The Challenge

The vehicles manufactured by our anonymous client are available in a range of sizes and are used in many diverse businesses. However, the vehicle's design is so special that they have had problems modelling the turning behaviour of the different sizes accurately.

The company therefore approached us looking for a computer program that would help them to accurately model the behaviour of this vehicle.

The Solution

AutoTrack was already able to model many aspects of the design but not all.

Nonetheless, Savoy's specialists were confident that they could enhance AutoTrack to provide the extra functionality and sure enough the next version was capable of fully modelling these unique vehicles.

Our anonymous colleagues are delighted with AutoTrack and now use it as part of the design process.

And the moral of this story...?

Don't write software that's so good your customers want to keep it to themselves!!

Why Anonymous use AutoTrack:

- Only swept path program capable of modelling their vehicles
- Easy to use vehicle editor to create their specialised vehicles
- They can be sure of excellent technical backup
