

Savoy Computing Services Ltd named an Autodesk Preferred Industry Partner

*AutoTrack Optimizes Performance for Autodesk Customers
in the transportation sector*

FOR IMMEDIATE RELEASE

Cranbrook, Kent

April 24, 2009

Savoy Computing Services Ltd, a global innovator of transport engineering software, today announced that it has been chosen as a Preferred Industry Partner by Autodesk, Inc., a leader in 2D and 3D design software for the manufacturing, building and construction, and media and entertainment markets for the European Union.

Savoy has been an Authorized Autodesk Developer for more than 20 years. Their flagship product, AutoTrack, was first available on AutoCAD 11 and has supported every version of AutoCAD software since then. Today, AutoTrack offers civil engineers, architects and planners the most advanced path prediction system available. Capable of analysing the turning performance of almost any wheeled vehicle AutoTrack allows engineers to validate their designs at every stage of the construction process. Additional modules for aircraft and light rail allow users to analyse complete transportation schemes and its ability to model extreme vehicles such as bridge beam carriers is second to none. Uniquely, AutoTrack takes advantage of AutoCAD-based solutions and their 3D visualisation tools to provide users with real-time, multi-vehicle, 3D animations of their schemes, leveraging the intelligent data of AutoCAD Civil 3D software and giving non-technical stakeholders the opportunity to assess and contribute.

Overall, AutoTrack provides engineers in the transportation engineering industry with a vital tool that helps them optimise designs, reduce waste and thus minimise costs.

Savoy's Managing Director, Martin Jefferys, says, "Savoy has enjoyed a long and fruitful relationship with Autodesk and their products. By helping us to build on AutoCAD-based systems, the world's most widely used and respected CAD systems, Autodesk has helped us establish AutoTrack as the market leader and a de-facto standard in its field. Engineering giants like Arup and URS recognise the value that the AutoCAD/AutoTrack partnership adds to their businesses; value such as better and more efficient designs, faster approvals, increased confidence in their designs and ultimately a reduction in downtime and wastage."

"We're proud to be working closely with an industry leader like Savoy Computing Services Ltd," said Jim Quanci, Director of the Autodesk Developer Network. "Together with our partners, Autodesk is committed to developing solutions that help customers experience their designs before they're real. Partners like Savoy Computing Services Ltd are central to achieving this goal."

The Autodesk Preferred Industry Partner program delivers tightly integrated, industry-specific software solutions that leverage the power of Autodesk's 3D modeling and simulation technologies to create competitive advantage for customers. Members of the Autodesk Preferred Industry Partner Program are market-leading software companies that Autodesk is working closely with to provide customers the breadth and quality of tools they need to make the move from 2D design and drafting to 3D modeling and simulation.

About Savoy Computing Services Ltd

Savoy Computing Services Ltd have led the development of innovative vehicle swept path solutions since the late 1980s. Their products, which are regarded as standard design tools by many companies, provide architects, designers and engineers with the most advanced and comprehensive set of vehicle access planning tools available today.
